01 | What is BarTrack?

BarTrack is the platform that brings inventory management and ordering together for both orderers and wholesalers. On one hand, BarTrack helps orderers optimise their inventory management and ordering process, enabling them to work more efficiently, while always having insight into their inventory, and easily place orders with their regular wholesalers. On the other hand, BarTrack empowers wholesalers to better serve their customers through a streamlined ordering process and improved visibility of their product range.

02 | Wat is our mission?

Our mission is to make managing and ordering inventory and project materials as smart and simple as possible.

03 | We are the link between orderer and wholesaler

BarTrack strengthens the collaboration between orderers and wholesalers by enabling orderers to order more smartly and allowing wholesalers to serve their customers more efficiently.

Orderers

- Order through one platform from all their wholesalers
- Have real-time insight into their inventory at all locations
- Have an overview of project materials
- Maintain control over inventory by monitoring lead times and ordering activities

Wholesalers

- Relieve customers with simple ordering
- Retain customers with a product range linked to standard inventory levels
- Offer cost-efficient VMI solutions
- Increase visibility with existing and new customers

04 | Avoid time-consuming ordering processes

Orders can be placed easily and clearly through BarTrack. Colleagues can collaboratively create order lists that are consolidated into one central overview. Once the order is delivered and the items are marked as received, the inventory is automatically updated.

You can easily place orders via BarTrack in the following ways:

- 1 Order items by searching the database
- 2 Order items by scanning the sticker with the BarTrack app
- 3 Automatically order when inventory falls below a minimum
 - inventory levels are tracked by scanning with the BarTrack app
 - inventory levels are tracked using the weighing cabinet
- 4 Order items based on the project materials list

05 | Order from all your wholesalers through one platform

Order your inventory replenishments or project materials via BarTrack from all your wholesalers. If your wholesaler isn't listed yet, you can easily add them yourself. Even wholesalers who are not yet connected will still receive your orders via BarTrack.

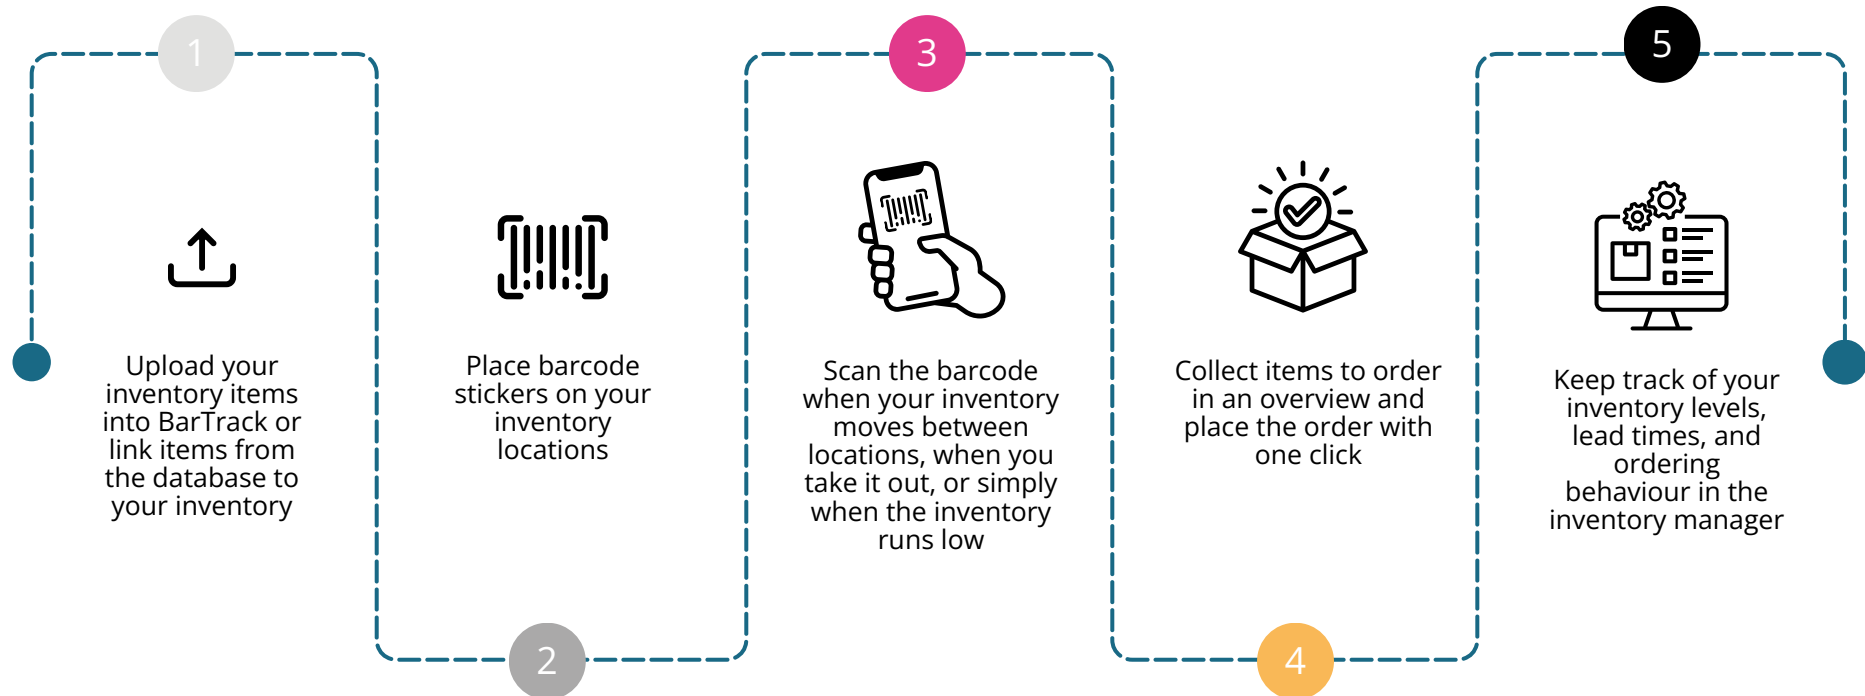

Wholesalers receive orders through the channel of their choice, such as a PDF via email, directly through the webshop, on an FTP server, via EDI messages, or through an API connection. These methods ensure that orders are processed efficiently and accurately.

The wholesaler is responsible for both the delivery of the products and the invoicing.

06 | Stay in control of your inventory

BarTrack provides real-time insight into your inventory across all your inventory locations.

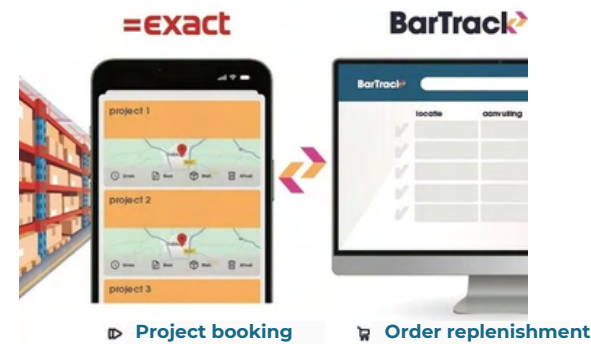

07 | Integrate BarTrack with Exact voor Bouw

BarTrack has two types of integrations with Exact voor Bouw (Bouw7). Link your Inventory Management in BarTrack with Exact voor Bouw or integrate your project material ordering with your administration in Exact voor Bouw.

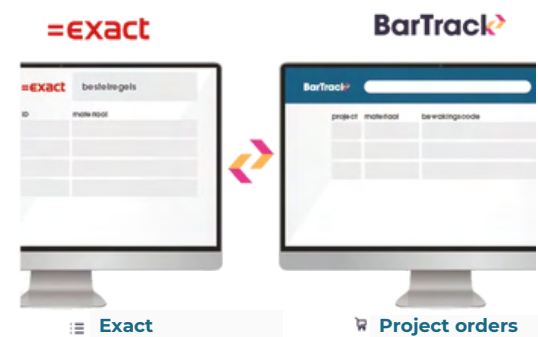

Inventory Management

- Book materials to a project by scanning inventory stickers via the Exact app.
- Quickly place orders with all your wholesalers and track deliveries via EDI connections.
- Assign inventory to locations and set limits for automatic notifications.

Project Ordering

- Easily order all purchase order lines from Exact voor Bouw via one platform.
- Choose from the 2BA database with 26 million products, including prices.
- Advanced search, link monitoring codes, and maintain control over projects and costs.
- Send orders directly to wholesalers with automatic PO numbers and status updates via EDI.
